

- 1) краткое описание дисциплины;
- 2) методы обучения;
- 3) методы оценки;
- 4) запланированное время обучения;
- 5) дополнительные сведения.

Например:

Syllabus

Structure and content of the discipline

Module 1

«Russia in the 9th-17th centuries».

Module 2

«The Russian Empire in the 18th-19th centuries».

Module 3

«Russian history from 1900 to 1945».

Module 4

«Soviet and Post-Soviet Russia in 1945-2019».

Teaching and learning methods

Lectures, Individual work, Practical.

Electronic questionnaire and formative assessment test, Electronic textbooks, Summative assessment tests, Exam questions.

В заключение отметим, что выбор стратегии зависит от цели текста, а использование доместикации и форенизации как континуума может привести к более эффективному переводу.

ARTIFICIAL INTELLIGENCE IN COMMUNICATION OF THE NEAREST FUTURE: ADVANTAGES AND DISADVANTAGES

Аннотация. В статье анализируются достоинства и недостатки использования искусственного интеллекта в качестве образовательного ресурса для улучшения навыков в области английского языка.

Ключевые слова: artificial intelligence, communication skills, learning a foreign language, English, advantages and disadvantages.

Artificial intelligence – is the phenomenon of the modern world. ChatGPT [2], one of the most popular kinds of AI, had a record-breaking adoption rate in the history of the tech industry. Only over a few months, the number of users of this chat has grown from one to one hundred million. AI replaces many processes, simplifies human work, but I want to dwell on another aspect of the use of this resource.

Communication with AI is mainly in English, since it has not been adapted to Russian yet. People learning a foreign language use the service to improve their communication skills, which has a number of advantages. The most important thing is ease of use. The user can start communicating with the AI at any time from anywhere, improving their grammar, vocabulary, writing and speaking skills. However, the safety of using AI is still questionable. In this paper, I want to analyze the pros and cons, as well as give an opinion on the use of AI to improve the communication skills of a foreign language.

Writing about the advantages of using AI, communication with AI is made from anywhere in the world at any time. There is no need to look for a partner, arrange meetings, fly abroad. In addition, the availability of communication with AI is confirmed by the cost of use. Initially, it was necessary to deposit a small amount of money, but now there are a lot of resources and, for example, you can chat on Character.ai [1] for free.

The same Character.ai offers many variations of communication. For example, one can communicate with celebrities such as Ariana Grande, Billy Eilish. The chat adapts to the style of communication of these stars and offers its own variations.

Communication with AI is very natural. So, when chatting about mental problems, the chat will not give the user statistics and scientific facts. The user will receive the support necessary for his motivation and further development.

When communicating with native speakers or friends, it often takes time to get a response. Using AI, the user receives an answer instantly, besides the answer is quite detailed. Saying goodbye to the chat, according to the rules of etiquette, it can wish good luck and have a good day, and it can also come back on previous remarks and send pleasant wishes.

In addition, communication with AI is useful, as the user can get specific information that interests him or her. No need to look for people with similar interests and hobbies. The chat adjusts to the preferences of a person and presents information, for example, about the past Eurovision, fashion shows, football matches.

It would seem that communication with AI has many advantages. It may sound utopian, but now people can stay at home and communicate with AI using their devices. However, this statement will have to be refuted, since the use of such chats has a number of disadvantages.

Since AI responses are a collection of information from various Internet resources, the answers can often be unreliable with distorted facts. Within the boundlessness of the Internet, you can find a lot of the so-called yellow cards, fakes, and therefore the chat can perceive these sources as the truth and give out information from there in their answers. This may lead to people's dissatisfaction, since the AI response will not fit the opinion and worldview of the user. For example, when asked about a favorite poem from Doctor Zhivago, the chat can send a non-existent poem.

It is also worth noting the insecurity of using such chats. For example, in April 2023, Italy banned GPT chat due to a data breach. Chat allowed users to learn the details of other users' conversations. In addition, the government was concerned that the chat had no age restrictions. This means that younger users can get information about inappropriate content.

Delving into the aspect of improving speaking and vocabulary skills, it is also worth mentioning that the AI is not tuned to native speakers' vocabulary. AI does not use phraseological units, idioms that are typical of the speech of native speakers. This means that you should not rely on comprehensive language learning through the use of such chat rooms. Additional information is required from other sources for the user's speech to become closer to that of the native speaker.

Overall, using of AI is under discussion. It is an awesome innovation. It can be used to help us in many ways. However, it can also have negative consequences. With continued advancements in AI technology, it is important to consider both the potential upsides and downsides of this powerful technology to ensure that it is used responsibly and ethically.
